Abstract

In the world of shinobi-warriors trained in the art of ninjutsu,taijutsu, and genjutsu, keeping intel on different shinobis, their abilities, their ranks, and similar attributes is crucial. Where the global order of the ninja world is at stake, large scale ninja wars, vicious ninja operations, and competitive tournaments, chunin exams are an all time reality. Nations need to have complete information on shinobis of other nations to estimate the strength of each nation. Such estimates help in battlefields,competitions, and missions to anticipate the scale of defense or offense required on a certain forefront. Moreover, it is also imperative to keep intel on rogue ninjas and associations-akatsuki to be able to tackle their villainous agendas. Lastly, tracking the progress skills of shinobis trained in the academy is essential for predicting future military capabilities of one's own nation. In a nutshell, a well-structured ninja database is the bread and butter of today's ninja world. An efficient database means a stronger and well informed nation, technically enhancing its capability to act strategically and have a tactical advantage over others.

Description

In the ninja world, all novice ninjas enroll in an academy and graduate after passing first tier exams known as genin exams. After which they are assigned in teams of three under supervision of senior ninjas to further train and enhance their ninja prowess. If deemed fit, the senior ninja trainer (jonin), approves his/her students to partake in second tier exams, known as chunin exams where genins from different nations come to compete for the title of chunin. This project aims to maintain shinobi database of :

1. Novice shinobis enrolled in academy of different nations
2. Shinobis that passed the Genin exams
3. Shinobis assigned to different rank missions
4. Shinobis Shinobis participating in Chunin exams.

Not all shinobis conform to the structures of the ninja world and its ideologies. Not all are courageous enough to walk the path of righteousness. So the fallen ones, the ones who betray their nations and resort to unlawful practices, need to be hunted down and put to rest for the good of all.

5. This project also aims to maintain a bingo book, keeping intel on any shinobis that have gone rogue to do the aforementioned deed.

Moreover, we have incorporated additional utilities to keep intel on resources of different nations, which includes ninja weapons, forbidden scrolls and other ninjutsu sources. Thus, this project also:

6. Maintains track of village's military arsenals and ninjutsu resources.

Design Scope

Entities involved in the database are :

1. Shinobi
2. Village
3. Jutsu
4. Clan
5. Rogue Association
6. Ninja Mission
7. Genin Squad
8. Standoff
9. Chunin Competition
10. Inventory

Some other Entities have also been added which act as bridge Tables between any two of the above entities :

1. Presided_By : Links *Shinobi* and *Village*
2. Led_By : Links *Shinobi* and *Clan*
3. Created_By : Links *Shinobi* and *Jutsu*

Design's Schema

Shinobi:

1. **ninjalid** : integer, primary key to uniquely identify each ninja
2. **ninjaName** : varchar(50)
3. **dateOfBirth** : date
4. **NinjaStatus** : varchar(50), represents current status of the ninja (Alive, Deceased, Rogue etc.)
5. **clan** : varchar(50), foreign key referencing the clan the ninja belongs to
6. **chakraNature** : varchar(50)
7. **jutsuName** : varchar(50), foreign key referencing the signature jutsu of the ninja
8. **village** : varchar(50), foreign key referencing the village the ninja resides in
9. **ninjaRank** : varchar(50)
10. **mentorNinjalid** : integer, nullable foreign key self-referencing shinobi to indicate who mentored this ninja

Village:

1. **villageName** : varchar(50), primary key to uniquely identify each village
2. **region** : varchar(50), the land or territory the village belongs to
3. **foundedYear** : integer
4. **VillagePopulation** : integer
5. **tailBeast** : varchar(10), the tailed beast associated with the village if any
6. **powerIndex** : decimal(3,2), a numeric rating representing the overall strength of the village

Presided_By:

1. **villageName** : varchar(50), part of composite primary key, foreign key referencing village
2. **ninjalid** : integer, part of composite primary key, foreign key referencing the ninja who leads the village
3. **leaderShipStartingDate** : date, the date this ninja assumed leadership
4. **LeaderShipStatus** : varchar(50), indicates whether the leadership is Active or ended

Jutsu:

1. **jutsuName** : varchar(50), primary key to uniquely identify each jutsu
2. **jutsuType** : varchar(50), the category of jutsu (Ninjutsu, Taijutsu, Genjutsu etc.)
3. **cooldownTime** : decimal(5,2), time required before the jutsu can be used again
4. **powerLevel** : decimal(3,2), a numeric rating of how powerful the jutsu is

Design's Schema

5. **jutsuStatus** : varchar(50), indicates whether the jutsu is Active, Obsolete or a Clan Technique
6. **chakraConsumption** : varchar(50), level of chakra required (Low, Medium, High, Extreme)
7. **rankRequired** : varchar(50), minimum ninja rank needed to perform this jutsu
8. **elementalNature** : varchar(50), the elemental affinity of the jutsu if any

Created_By:

1. **NinjaID** : integer, part of composite primary key, foreign key referencing the ninja who created the jutsu
2. **JutsuName** : varchar(50), part of composite primary key, foreign key referencing the jutsu that was created
3. **creationDate** : date, the date on which the jutsu was created

Rogue Association:

1. **ra_name** : varchar(50), primary key to uniquely identify each rogue organization
2. **memberCount** : integer, total number of members in the association
3. **leader** : integer, foreign key referencing the shinobi who leads the rogue association
4. **formationDate** : date, the date the rogue association was established
5. **activityLevel** : varchar(50), represents how active the association currently is (Low, Medium, High)
6. **originNationName** : varchar(50), foreign key referencing the village or nation where the association originated
7. **objective** : varchar(50), the primary goal or motivation of the rogue association

Ninja Mission:

1. **missionId** : integer, primary key to uniquely identify each mission
2. **missionObjective** : varchar(50), a brief description of what the mission entails
3. **missionRank** : char, the difficulty rank of the mission (D, C, B, A, S)
4. **missionType** : varchar(50), the category of the mission (Assassination, Escort, Recon etc.)
5. **missionStatus** : varchar(50), current state of the mission (Ongoing, Completed, Failed)
6. **teamAssigned** : integer, foreign key referencing the genin squad assigned to carry out the mission
7. **clientNation** : varchar(50), foreign key referencing the village or nation that requested the mission
8. **revenue** : decimal(10,2), the payment received upon mission completion

Standoff:

Design's Schema

1. **ninjalid1** : integer, part of composite primary key, foreign key referencing the first ninja involved in the standoff
2. **ninjalid2** : integer, part of composite primary key, foreign key referencing the second ninja involved in the standoff
3. **Slocation** : varchar(50), the location where the standoff took place
4. **Sstatus** : varchar(50), current status of the standoff (Ongoing, Completed)
5. **winnerNinjalid** : integer, foreign key referencing the ninja who won the standoff, nullable if ongoing

Chunin Competition:

1. **ChuninYear** : integer, primary key representing the year the competition was held
2. **winnerNinjalid** : integer, foreign key referencing the ninja who won the competition
3. **runnersUpNinjalid** : integer, foreign key referencing the ninja who came second
4. **venueNation** : varchar(50), foreign key referencing the village that hosted the competition
5. **participantCount** : integer, total number of ninjas who participated
6. **MainSponsorClan** : varchar(50), foreign key referencing the clan that sponsored the event
7. **totalMatches** : varchar(50), total number of matches held during the competition
8. **duration** : integer, number of days the competition lasted

Genin Squad:

1. **teamNo** : integer, primary key to uniquely identify each genin squad
2. **teamMentor** : integer, foreign key referencing the ninja who mentors the squad
3. **teamMember1** : integer, foreign key referencing the first member of the squad
4. **teamMember2** : integer, foreign key referencing the second member of the squad
5. **teamMember3** : integer, foreign key referencing the third member of the squad
6. **SquadStatus** : varchar(50), current status of the squad (Active, Disbanded etc.)
7. **SquadRank** : char, the overall rank of the squad
8. **missionAccomplished** : integer, total count of missions successfully completed by the squad

Inventory:

1. **ninjaGearId** : integer, primary key to uniquely identify each piece of ninja gear
2. **Iname** : varchar(50), the name of the inventory item
3. **Irange** : decimal(3,2), the effective range of the item in meters
4. **worth** : decimal(3,2), the monetary value of the item
5. **Icount** : integer, the quantity of this item available

Design's Schema

6. *rarity* : varchar(50), the rarity tier of the item (Common, Rare, Legendary etc.)
7. *ownedByNation* : varchar(50), foreign key referencing the village that owns this item, nullable if unclaimed

Clan:

1. **clanName** : varchar(50), primary key to uniquely identify each clan
2. *originVillage* : varchar(50), foreign key referencing the village the clan originated from
3. *specialAbilities* : varchar(50), the unique power or kekkei genkai associated with the clan
4. *clanSymbol* : varchar(50), the symbol or emblem that represents the clan
5. *clanSize* : integer, the total number of members belonging to the clan

Led_By:

1. **clanName** : varchar(50), part of composite primary key, foreign key referencing the clan being led
2. **Ninjalid** : integer, part of composite primary key, foreign key referencing the ninja who leads the clan
3. *StartingDate* : date, the date on which the ninja assumed leadership of the clan

Functionalities

1. Adding a new ninja to the Bingo Book

```
--3
--Adding a new ninja to the Bingo Book
Insert into shinobi (ninjaId,ninjaName,dateOfBirth,NinjaStatus,clan,chakraNature,jutsuName,village,ninjaRank,mentorNinjaId)
values (29,'Konohamaru Sarutobi','2007-09-24','Alive','Sarutobi','Wind','Rasengan','Leaf','C',7);
```
